

Google Ads + GA4 Audit Report

Fictional sample: Harbor Home Services | Current period July 1-30, 2026 | Previous period June 1-30, 2026

OVERALL STATUS

MEASUREMENT REVIEW FIRST - the account reports page views as Primary conversions and GA4 paid traffic shows zero key events. Do not interpret reported CPA or ROAS as lead-generation performance.

1. Executive summary

Google Ads generated 23,257 impressions, 1,682 clicks, and \$5,534.19 in spend during the current period. The platform also reports 1,682 conversions and a 100% conversion rate. These are not confirmed leads: the only visible Google Ads conversion action is Page view, configured as Primary and included in account-level goals. GA4 shows zero key events for google / cpc traffic. The first priority is therefore to create and test a qualified estimate-request event, then use that event for optimization. Until reliable outcomes record, campaign-level CPA, ROAS, and budget recommendations are not decision-ready. Search terms with employment or training intent may be waste candidates, but those should be reviewed after tracking is corrected. Re-run the audit after 14-30 days of clean data.

2. Measurement and data-quality status

Check	Status	Evidence	Decision
Date ranges	Pass	Two matching 30-day periods.	Continue.
Primary action	Fail	Page view is Primary and account-default.	Replace with qualified outcome.
Tracking status	Review	Action is Active.	Active does not validate business meaning.
GA4 paid key events	Fail	google / cpc shows 0 key events.	Configure and test key event.
GA4 scope	Pass	Session source / medium included; landing file documents google / cpc filter.	Use for traffic context only.
Overall readiness	Fail	100% reported CVR + 0 GA4 paid key events.	Measurement review first.

3. Account scorecard

Metric	Current	Previous	Interpretation
Impressions	23,257	Prior-period value in workbook	Traffic volume is measurable.
Clicks	1,682	Prior-period value in workbook	Traffic volume is measurable.
Cost	\$5,534.19	Prior-period value in workbook	Spend is measurable.
Reported conversions	1,682	Prior-period value in workbook	Page views, not qualified leads.
Reported CVR	100%	Near 100%	Invalid as business conversion rate.
GA4 paid key events	0	0	No qualified paid outcome currently measured.

4. Confirmed findings

Priority	Evidence label	Finding	Evidence	Recommended verification
Critical	CONFIRMED FINDING	The Primary Google Ads outcome is a page view.	Conversion screenshot: Page view / Primary / account-level Yes.	Create a meaningful qualified-lead action and verify campaign goal usage.
Critical	CONFIRMED FINDING	GA4 paid traffic has no key events.	GA4 Traffic Current: google / cpc key events = 0.	Configure form-submit key event; test once; verify no duplicate firing.
High	CONFIRMED FINDING	Reported CVR is not a business conversion rate.	1,682 clicks and 1,682 reported conversions.	Stop using reported CPA and ROAS for business decisions.
Medium	POSSIBLE EXPLANATION	Some search terms may reflect job/training intent.	Search terms include "free hvac training" and "plumbing jobs near me."	Review intent and add negatives only after tracking fix.

5. Prioritized action plan

Priority	Owner	Action	Success check	Risk without verification
Critical	Web owner	Create and test qualified estimate-request key event.	One real test records once in GA4 and Google Ads.	Duplicate or missing events remain.
Critical	Marketing owner	Update Primary/Secondary and campaign goal use.	Smart Bidding uses the qualified action, not page views.	Budget continues optimizing visits.
High	Web owner	Validate with Tag Assistant / DebugView.	Status and event parameters are correct.	False confidence from "Active" status.
Medium	Ads owner	Review clearly irrelevant search intent.	Negatives block non-customer intent without suppressing valuable variants.	Premature negatives reduce useful traffic.
Medium	Marketing owner	Re-run audit after 14-30 clean days.	Valid CPA and conversion trend available.	Decisions remain based on broken denominator.

6. Limitations

- No qualified lead or offline sales data was supplied.
- The report cannot evaluate call quality, lead quality, margins, or creative quality.
- The search-term sample is illustrative and may not include every query.
- Google Ads and GA4 are not expected to reconcile exactly even after tracking is corrected.

DECISION

Fix and test measurement before changing budgets, bidding targets, or campaign allocation.
